

VESTAPOMP

Makes life comfortable

SCP

ISO 2858

NORM PUMPS

Handled Liquids

Clean or normal contaminated low or medium viscosity liquids without solid & fibrous particles.

Technical Data

Discharge Flange _____ DN 32.....DN 250 mm

Capacity _____ up to 1500 m³/h

Head _____ up to 160 m

Speed _____ up to 2900 rpm

Operating Temperature _____ -10 °C' to +175 °C*

Casing Pressure (Pmax) _____ 16 bar (25 bar)*

(Pmax: Suction Pressure + Shut off Head)

(*) The Material of pumps differ according to the type of pumped liquid, operating temperature and pressure. Contact for detailed information.

Design Features

- Horizontal, radially split volute casing type, single stage, end suction centrifugal pumps with closed or semi-open impeller.

- In addition to 28 basic sizes conforming with ISO 2858, there are 10 additional sizes. Dimensions of additional sizes may differ from other suppliers.

- Heavy duty shaft not in contact with the medium handled (dry shaft)

- For casing sealing, confined gaskets are used to prevent blow-out under pressure.

- Suction and discharge flanges conform to EN 1092-2 / PN 16. (EN 1092-1 / PN 16 for steel or stainless steel casing)

- Due to the back-pull-out design, the complete bearing assembly including impeller and casing cover can be dismantled without removing the volute casing from the pipe system. (With spacer coupling application, also possible to take out the rotor group without dismantling the electric motor.)

- All impellers are balanced dynamically or statically according to ISO 1940 class 6.3.

- For closed impellers, axial thrust is balanced by impeller balancing holes system while for semi-open impellers, it is balanced by back ribs.

- Direction of rotation is clockwise viewed from drive end.

- Bearings of SCP type pumps are always oil lubricated.

Shaft Sealing

- Depending on request or requirement, pumps with soft packing or single, double and cartridge type mechanical seals can be supplied.

- External seal cooling system may be used if required.
